

PlayStation holds sway Sony got its chance to shine at At Game Expo '95

software event

ame Expo, Japan's latest games event took place this spring amidst a frenzy of hype and glitz. Promoted as the first dedicated next-generation exhibition, it was expected to feature the three major players in the field - Sega. Nintendo and Sony - in a head-on clash. But, for reasons of its own, Sega elected to remain absent, fuelling gossip that it was concerned about its ability to compete on the same terms as its neers

The exhibition was relatively under-attended by Japanese game show standards, with only 49 companies taking floorspace. The reduction in interest could be attributed principally to the decline in the 16bit market - although Japan is suffering less than the West in this respect. Without the glut of SNES and Mega Drive games which has characterised recent shows, the way was clear for Sony to take centre stage with demonstrations of in-house and thirdparty software accounting for some 60% of the available floorspace.

Unprolific publisher Zoom received the most attention over the show's three-day run, unveiling an almost finished version of Zero Divide, its contribution to the burgeoning 3D fighting game scene. Offering robotic

Namco's stand played host to its amazing home version of Tekken, but the premier PlayStation softco wasn't neglecting its other glories...

characters as combatants, it wowed audiences with Toh Shin Den-style graphics but its gameplay failed to impress to the same extent as the Namon game's 'Unresponsive' was the general appraisal of Japan's beat 'em up-crazy gaming fraternity.

Conversely, Tekken covered all bases by delivering both knockout visuals and fast and fluid gameplay. Namco projected the game onto a vast screen during the show and - in typical Japanese fashion - organised several competitions to further build interest in the game that's becoming its biggest PlayStation title yet.

Sharing space with Tekken was an early version of Ace Combat. The coin-op conversion generates fully texture-mapped backgrounds but. although it runs and plays smoothly, Edge found it too slow at this stage of development to be very exciting.

SCE itself presented the finished version of the much anticipated 3D platform title Jumping Flash, along with Gunner's Heaven. Both attracted appreciative audiences, although the two games are very different: Flash is a → June

Release schedule

A selection of the 25 PlayStation games scheduled for release up to the end of June 1995.

(X-ing/Irem) ¥6800

May 26

June 30

UBI Soft) ¥580

→ fast polygon effort while Heaven is a traditional dedicated sprite shifter. Wizardry VII also gained its first airing and proved that the sombre tones evident in titles like Kileak The Blood and Space Gryphon aren't the last word in Doom-type environments - a bright, vivid palette distinguished the PlayStation continuation of the successful PC RPG series.

The biggest disappointment was the non-appearance of Philosoma, a game initially scheduled for release earlier this year. It's gaining almost legendary status now, with the time delay generating high expectations for its mix of vertical, horizontal and realtime 3D shoot 'em up sections. Instead of a playable demo, SCE presented a brief video-wall presentation just to keep gamers' interest piqued until the game's eventual release in June.

Elsewhere, Pony Canyon held the first demonstration of multiplayer linked PlayStation software with Metal Jacket and Tomy unveiled a 3D wrestling title with beefy fighters looking remarkably similar to those of Boxer's Road.

SCE's very smooth-looking Jumping Flash adorned a gigantic video wall

Zero Divide's graphics gained it a sizeable audience of 3D-hungry showgoers

Nintendo had a strong presence, although no new Ultra 64 demos were forthcoming, leaving consumers waiting until E3 for news of the initial software line-up to break, Instead, Virtual Boy headlined (again), in a dedicated area where 3D projections of new games Mario's Dream Tennis and T&E Soft's Red Alarm were shown.

Several conferences took place during the course of the exhibition. Bullfrog's Peter Molyneux spoke on the 'imagination of humanities', while Will Wright's address concerned the game design techniques employed on the Sim City series - a popular choice among Japanese strategy gamers and Lou Adams (creator of Wizardry and Ultima IV) waxed lyrical about plot development.

Publisher New provided playable consoles to demonstrate its sports title, Boxer's Road (see page 38)
