Welcome to GF's first ever hands-on Ultra 64 cover-age. Before you dive in, please note that these between 20% complete. are and 50% complete. *Mario*64 and *Kirby Bowl 64*were the early

demo ed on video. Nintendo balked on more playable pames to en on playable on the rest were balked on more playable games to curb the early criticisms inherent in many publications. As you, I, and Yamauchi know, many publications pass judgment based on unfinished work. Nintendo's head honcho wasn't going to let anyone destroy his day in the sun. Except for Mario 64, all these games will look quite different the next time you see them. Also note that to see an Ultra game (either via scans or video grabs, both of which hurt dramatically), is one thino: to see and play an Ultra game is grabs, both of which hurf dramatically), is one thing; to see and play an Ultra game is a completely new experience. What I'm trying to say is that these screen shots simply do not do the games justice. Unfortunately, setting up our Mac's on the show floor for some quality GameFan RGB grabs was strictly out of the question, so, as usual, we've been reduced to slide scans and video grabs which lose much resolution in the make ready process.

Nintendo has indeed delivered, as promised, a machine capable of taking us to a completely new level that, for the time being,

has no equal in the home console market. The hardware alone is spectacular, but the real proof is in the innovative game designs which are just beginning to take shape. The controller is a whole 'nother story, which you'll read about here.

'nother story, which you'll read about here.
I cannot stress enough how early everything at Shoshinkai was.
It's way too early to form an opinion, other than the fact that this hardware marks one of the most impressive technological break-throughs in gaming history, and further, will indeed be above comparison. The Ultra 64 is in a world all its own, a 3D world that shows incredible promise. Nothing pops, shimmers or glitches. They are clean to the point of disbelled even at an early state. The only drawback is that it may be quite some time (up to a year) before we see any third party titles out of Japan. America will have a handful but many bin names are absent. All initial

many big names are absent. All initial Japanese Ultra games are from NCL, which, when you think about it, isn't so bad. Under the NCL umbrella lies Rare, DMA Design, Hal, and Paradigm. The Ultra is in good hands and will retail for under \$250.00 as promised. The Ultra 64 debuts in Japan on April 21st, 1996, and about a month later in the US

ame console, the Ultra 64 (called

Mr. Yamauchi's opening remarks included an introduction to the Nintendo 64 and then dealt with the mixed success of the new Virtual Boy system

and then dealt with the mixed success of the new Virtual Boy system.

"Despite the lack of unique titles, we still thought it (Virtual Boy) could be sold. I want to return to the starting point and find titles that emphasize the difference that Virtual Boy games can provide. I want to start afresh in 1996."

Mr. Yamauchi recommitted Nintendo to the development of unique software for this 3-D immersive system. He noted that several new titles were in the works for the Virtual Boy. In particular, he noted that several new titles were in development by an Osaka developer that showed some of the unique possibilities that Virtual Boy can deliver in a game.

Stall "In new to talk should the market and the Nictendo 64, not the Virtual Boy." Mr.

That Virtual Boy can deliver in a game.

"But I'm here to talk about the market and the Nintendo 64, not the Virtual Boy." Mr. Yamauchi went on to comment on the state of the video game market and how the Nintendo 64 will raise expectations. He explained that the reason for there being only two playable games at the show is that people are disappointed when they view incomplete games. He noted that Super Mario 64 was 50% complete, but that players are already familiar with Super Mario games and therefore they can see the uniqueness and quality of this new Nintendo 64 title. "I might be bragging, but when this game is complete, it may be the best video game in history. The launch of Super Mario 64 with the Nintendo 64 will occur next April 21st." Mr. Yamauchi indicated that even though titles based on popular games such as Mario Kart are in development, fans of Super Mario Kart won't be able to see the uniqueness of the Nintendo 64 version of Mario Kart until it is at least 80% complete. He indicated that the game would be so fun and unique when it reached that point of completion, that it would help showcase the new video game system." Clearly, when users who have been playing with Super Famicom Mario Kart can tell exactly how different the (Nintendo 64 are. And they will know just how different the Nintendo 64 is from other video game systems."

Mr. Yamauchi then asked, "What is the true nature of video games?" He feels that many people, including critics, miss the point of what makes a video game special. "The real value comes from playing high-quality, finished games."

mir. Fathauchi men asked. What is the true hature of video games. The freat value comes from playing highquality, finished games."

Taking a moment to look back at the disastrous collapse of the video game market in the USA twelve
years ago. Mr. Yamauchi pointed out the importance of salistying customers with excellent titles. He noted
that many developers stress the number of titles they make over the quality of their titles, hoping for a big
hit. But Mr. Yamauchi feels that this is a recipe for disaster. "Users will just reject repetitious titles. They
are sophisticated. They aren't looled by copycat titles." He also pointed out that next generation hardware is meaningless without next generation games.

"The market should be led by software. But when you're talking about the next generation machine
you're talking about hardware. Users want software. creative, innovative software that offers a fun experience they have never witnessed before. This is a market that is led by software, so it doesn't make sense
to talk about the so-called next generation machine."
In addition, he noted that many titles for new video game systems concentrate only on filling up memory with graphics and music while not adding to the game experience. He also mentioned that distributors
should have greater expertises so that they don't put poor titles on retail shelves.

"Why did we launch the kintendo 64? To detend and protect the video game market? For Nintendo to
become the sole, absolute, hegemony in the market? No. We are launching the Nintendo 64 to rescue and
save the market so that users won't leave us. We want to assure our future."

Mr. Yamauchi's vision of the Nintendo 64 controller enables new seeds or ideas to grow with developers. For example, the 3-D Stick can be used in sports games such as soccer and baseball for more realistic control. A qualitative difference can be felt by the users. Without those changes, there may not be
to the socretic page.

future for video games.

Inture for video games.

Next, Mr. Yamauchi touched on the benefits of cartridge-based games. "Many of you feel that CD-ROM is the call of the day. But look at the latest buzz word in the computer world—plug-and-play—which is nothing but Famicom culture. In addition, customers thought that having no loading time is a great advantage, but more importantly, by using ROM-based games, other chips can later be incorporated into the cartridge, which allows Mintendo to offer new game opportunities to game developers. The Nintendo 64 will carry on this tradition of using mask ROM and computer chips to provide the most advanced games."

Mr. Yamauchi also talked about plans for a bulk storage device for the Nintendo 64. "In addition to Mask ROMs. Nintendo intends to provide a range canacity, bulb-sneed peripheral that not not yeards data, but if

ROMs. Nintendo intends to provide a large capacity, high-speed peripheral that not only reads data, but it writes it, as well. At next year's exposition, this new media should be introduced in video games, and hopefully, visitors can play with and see what this new media can provide." He emphasized that the read/write peripheral is not just for storing large amounts of data, but that it will allow the development of

significantly new types of game play. He went on to list two potential projects that could make use of this new technology by the end of 1996—Legend of Zelda and Dragon Quest VII.

Mr. Yamauchi concluded his speech by inviting developers (who want to begin working with the Nintendo 64) to join him on Dec. 14 at NCL in Kyoto where issues of game quality and innovative design for the Nintendo 64 will be addressed. In addition to this, he stated that game cartridges for the Nintendo 64 would cost 9,800 yen, which is cheap-er than some current Super Famicom titles. With 15 million Super Famicom/SNES systems in Japan, Nintendo will continue to support 16-bit gaming next year.
